

Roller Garage Doors

Insulated Roller Garage Doors combine the convenience of powered operation with the advantage of a smooth vertical opening. This allows you to park right up to the door, whilst the pocket transmitter enables you to open and close the door from inside your car. Meanwhile the tightly coiling curtain creates more space inside your garage to accommodate high top off-road vehicles or people carriers.

This outstanding, yet attractively priced insulated roller garage door concept has been specifically designed and refined to improve on many of the virtues of both conventional steel roller doors and sectional overhead doors.

The Eurotherm is made-to-measure so that it fits the garage perfectly. Manufactured from strong corrosion-resistant aluminium with an insulated core that ensures your door continues to look good year upon year and represents a sound investment for the home. The Eurotherm is very low maintenance and comes complete with a comprehensive 1 year guarantee on all manufactured parts and labour and 5 years on the Somfy motor, for total peace of mind.

Choice of Low Maintenance Finishes

Eurotherm doors are ideal for external applications as all exposed components are made from corrosion-resistant aluminium and then polyester powder coated for a high quality finish.

Roller Garage Doors

Eurotherm's Construction

Eurotherm's 77mm profile is the leading product in sound reduction and insulation. The Eurotherm has been rigorously tested to easily span an opening of up to 5.4m wide. With a wide choice of colours, incorporating our new textured wood range, which facilitates the increasing demand for wood grain simulated UPVC windows and doors.

Standard Head Plate

Once fully retracted, the curtain is housed between two head plates, which locate into the side guides via a cast aluminium leg. This helps distribute the weight of the door into the guides, whilst simplifying the installation. The curtain is then

assisted on its descent by two nylon rollers mounted onto the base of the head plates.

The option of a front and back cover will increase the weather protection whilst making the door even more aesthetically pleasing.

Remote Operation

Operation of the Eurotherm is effortless via an ANSA RS-1 remote control receiver and transmitters.

The ANSA RS-1 unit is inclusive of:

- Courtesy light
- Two key fob transmitters with rolling code security
- Magic eye safety photocell beam or a wireless safety edge

Other methods of operation include, key switch, push button or via a rocker switch. Multi-channel remote controls can be supplied to operate more than one door from a single transmitter.
